Sponsorship Proposal
October 2026

GrowWithMe — offline maternal & child health care for Northern Ghana

Sponsorship request to the MTN Ghana Foundation · Submitted by TOVO LABs (Abdul Hafis Mohammed, CEO)

The initiative

GrowWithMe is a mobile health platform built by TOVO LABs for mothers and children under five in Northern Ghana, where distance, poor connectivity and low literacy keep families from timely care. The app works fully offline on a basic Android phone, and every life-critical message it sends — urgent referral alerts, care reminders — travels on MTN's network as SMS. The platform is built and working today; this sponsorship funds a 12-month supervised district pilot.

What is already working (no pilot subsidy required to demo)

- Offline IMCI-aligned triage (child + pregnancy) — works with zero network; deterministic clinical rules own every risk verdict
- WHO growth monitoring with automatic malnutrition flags (below –2 SD)
- Care calendar synced to Ghana's EPI immunization schedule, ANC/PNC visits, Vitamin A — with spoken reminders for low-literacy mothers
- “Nana”, a voice-first AI health educator with an offline fallback for no-connectivity homes
- One-tap urgent alerts: PDF patient report SMSed to the nearest CHPS compound, volunteer responders and the referral hospital — every referral tracked to closure
- Facility dashboard surfacing missed visits, growth faltering and lost-to-follow-up families, each with an SMS nudge

Amount requested: GHS 150,000 — 12-month supervised district pilot

One district · ~40 community health workers (CHWs) · ~5 CHPS/facility sites · 1,500–2,000 mother–child registrations

Use of funds

Item	What it covers	GHS
SMS & alerts	Referral alerts and care reminders for ~1,500–2,000 families for 12 months	18,000
Devices	40 Android phones for community health workers	40,000
Data bundles	Monthly MTN data for CHWs and facility staff (12 months)	24,000
Training & supervision	CHW onboarding, refresher training, field supervision and transport	48,000
Evaluation & reporting	Pilot KPI tracking, data quality, final impact report to the Foundation	20,000
Total		**150,000**

Why MTN — and what the Foundation gets

MTN's network already carries the life-critical leg of every GrowWithMe referral: SMS. Beyond funding, we would welcome zero-rating of the app's traffic so no mother pays data to be heard. In return, the Foundation is positioned as the connectivity partner powering closed-loop maternal and child referrals in Northern Ghana: named recognition in the pilot report and communications, a site visit to the pilot district, and a demo of the working product for the Foundation team at any time.

Expected impact — pilot targets

- 1,500–2,000 mothers and children under five registered and actively followed in one district
- Every urgent alert time-stamped from danger sign to facility arrival — the referral loop measured, and closed, for the first time
- Measurable lift in EPI immunization-schedule completion and ANC/PNC attendance against the district baseline, via SMS nudges
- Growth faltering caught early (WHO –2 SD flags) with catch-up visits scheduled automatically
